In the questions of **prep6.txt**, you'll get some practice using **subqueries** in SQL. Though there are several different ways of solving these questions, we strongly encourage you to use subqueries and the keywords **SOME**, **ALL**, **IN**, and **EXISTS** to solidify your learning this week.

How to Submit

Enter your answers into **prep6.txt**: your answers should all be placed under the line of `---`s. For example, your answers should look as follows:

```
===========================================================================

[Q1] The question will be asked here.

---------------------------------------------------------------------------

ENTER YOUR ANSWER HERE

===========================================================================
```

You may run the automated self-tests on MarkUs in order to check the correctness of your answers. To do this, submit your prep6.txt and then click on the "Automated Testing" tab. Click "Run tests": your results should appear after a few minutes.

Country Schema

country(code, name, continent, population)

countrylanguage(countrycode, countrylanguage, isofficial, percentage)
